

MCSA Milwaukee Road Switching Scenario

In this Milwaukee-Road-themed scenario for the 1920s MCSA route, your job is to assemble a train of outbound cars at the lumber mill yard, take it to the interchange, and return with a train of inbound log cars. Requires two payware and some freeware downloads, or the use of RW_Tools to substitute any missing rolling stock items.

By Michael Stephan

Add-ons needed to run this scenario:

Read this if you do not want to download (or buy!) and install quite so many files: With the help of Mike Simpson's (donationware) RW_Tools suite of utilities you can quite easily substitute any piece of equipment used in this or any other scenario. Please read on here for more information about RW_Tools: www.rstools.info
