

IIR PRR Winter Switching Scenario 3+3 Pack

Almost three hours of switching duties on the Industrial Interactive Route, set in a PRR-themed environment. There are three parts of the scenario that you should play parts 1 through three, as they form a little 'story' with in- and outbound cars.

You can also choose if you want to run these scenarios behind the throttle of a GP9 (from the Horseshoe Curve route) or an RS3 (Dick Cowen's model). Apart from the engine choice, the two scenario 3-packs are absolutely identical.

To install only the version with the GP9, install the file [IIR-PRR_Winter-Switching.rwp](#). Use the file [IIR-PRR_Winter-Switching_Alco.rwp](#) to install the version with the RS3.

Please note: due to some signaling issues that have crept in with the TS2012 update in this route, you should run this route with "Exit on SPAD" disabled in the gameplay options. This will enable you to run over the red signals protecting the interchange yard – which you must do in order to pick up cars there, especially in the second scenario. Sorry for this inconvenience!

Add-ons needed to run this scenario:

Read this if you do not want to download (or buy!) and install quite so many files: With the help of Mike Simpson's (donationware) RW_Tools suite of utilities you can quite easily substitute any piece of equipment used in this or any other scenario. Please read on here for more information about RW_Tools: www.rstools.info
